

# ONLINE FOOD DELIVERY

---

## *Ella Kitchen - Online Food-Delivery Web App*

Localhost / WAMP – Quick-Start Summary

### PROJECT

Name : Ella Kitchen

Type : PHP/MySQL online food-ordering & delivery system

URL : <http://localhost/onlineDelivery/Login.php>

### PLACEMENT

WAMP root → C:\wamp64\www\onlineDelivery

(XAMPP/LAMP adjust path accordingly)

### FOLDER MAP

Root/

- |— connection.php      – shared DB config (utf8mb4, TZ Africa/Addis\_Ababa)
- |— Login.php          – unified login & role-based redirect
- |— images/            – logos, food pics, banners
- |— Admin/            – full back-office (menu, cats, users, orders, reports ...)
- |— customer/          – storefront (browse, cart, checkout, profile, complaints)
- |— delivery\_person/    – accept/reject orders, GPS tracking, mark delivered
- |— manager/          – sales reports, complaints, applications
- |— Waiter/            – confirm orders, assign deliveries

### DATABASE

-----

Engine : MySQL

Name : Ella\_delivery

Create it via phpMyAdmin, then import provided SQL dump (if any).

If no dump exists, minimum required tables must be created manually:

- users, roles, categories, foods, orders, order\_items, delivery, complaints, etc.

### CORE CONFIG

-----

Edit connection.php with your credentials (default: root / "").

## MINIMUM REQUIREMENTS

Server : WAMP (Windows+Apache+MySQL+PHP)

PHP ≥ 7.4, extensions: mysqli, json, session

Browser: Chrome (HTML5, CSS3, ES6+) or another

## QUICK START

1. Extract project to C:\wamp64\www\onlineDelivery
2. Start WAMP → Apache + MySQL green
3. phpMyAdmin → create DB “Ella\_delivery” and import SQL
4. Adjust connection.php credentials
5. Browse <http://localhost/onlineDelivery/Login.php>
6. Log in according to role (credentials pre-seeded or create via Registration).

## QUICK ACCESS

1. Github repository link:- [https://github.com/Jossikalex/Online\\_food\\_delivery.git](https://github.com/Jossikalex/Online_food_delivery.git)
2. Youtube link:- <https://youtu.be/fycb7dox0uo>
